PCB TECHNOLOGIES has set its goal to be at the technological forefront in the field of the company's activities.

The company practices a policy of safety and environmental protection built into its general strategy.

PCB TECHNOLOGIES commits itself to the following:

- To establish and maintain an environmental management system in accordance with ISO standard 4001 and a safety management system according to ISO standard 18001.
- The actions of the company will meet the relative legislative requirements.
- To place as a goal the prevention and minimization of environmental pollution by its actions.
- To monitor and control the implementation of safety and environmental procedures according to legislation.
- Improve continuously and gradually the safety and environmental procedures.
- To continue gradually to equip the facilities with means to enable better safety and environmental performance.
- All new facilities will be equipped with technology that takes safety and environmental protection in account.
- Clear and quantitative goals, objectives, division of responsibility and authority as well suitable assets and budget will be determined and allocated annually.

The company's safety and environmental policy will be distributed to all employees, suppliers and customers and will also be available to the general public.
